SUB-SAHARAN AFRICA

SUB-SAHARAN AFRICA

Sub-Saharan African countries are distributed primarily within the lower ranks of economic freedom. Nonetheless, a number of countries in the region have substantial growth momentum, and the positive economic results achieved through limited advances in economic freedom have created valuable impetus for the additional institutional reforms that are needed to ensure long-term economic development.

However, the region as a whole continues to underperform in following through on policy changes that would encourage the emergence of a more dynamic private sector. Structural transformation and modernization remain patchy in many African countries. Limited diversification has resulted in less broad-based growth, with exports often concentrated in sectors with little scope for sustained increases in productivity.

Regrettably, in some cases, the signs of repeated government failure continue to be overwhelming. The population-weighted average GDP per capita for the region is only \$5,334, the lowest level of any region. Unemployment hovers at 7.7 percent.

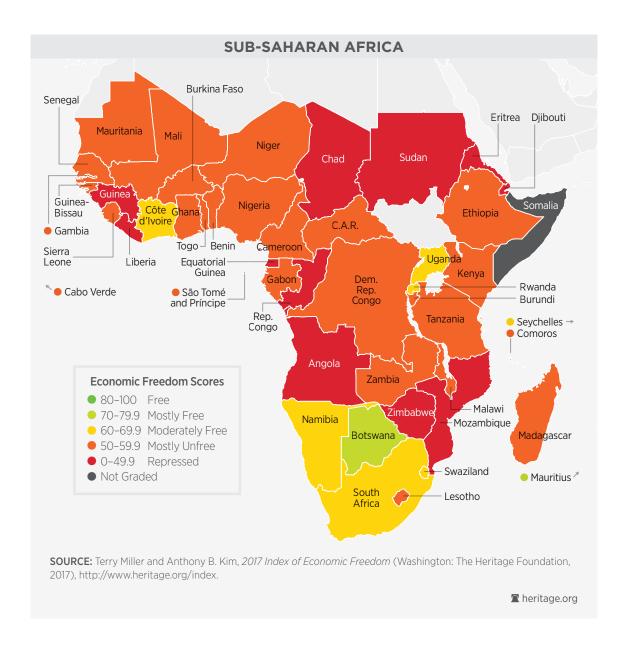

Chart 1 shows the distribution of countries in the Sub-Saharan African region among the five categories of economic freedom. Unlike regions that have a diverse range of free-market economies, in sub-Saharan Africa, there are only distinctions among less free economies. There is no "free" economy in the region, and Mauritius and Botswana are the only "moderately free" economies. A majority of the 47 graded nations are ranked either "mostly unfree" or "repressed." In fact, 11 of the world's 23 "repressed" economies are in Sub-Saharan Africa.

As shown in Table 1, the single factor for which the region scores higher than the world average is government size. Ironically, however, it is worse than average in terms of taxation, which might indicate that tax revenues are being stolen rather than spent on government services. Labor freedom is restricted, reflecting in part the region's lack of progress toward a modern and efficient labor market. Despite ongoing reform efforts in many countries, policies related to regulatory efficiency and open markets have not advanced strongly in comparison to other regions of the world.

More critically, uneven economic playing fields, exacerbated by the weak rule of law, continue to leave those who lack political connections with only limited prospects for a brighter future. The region's scores on property rights, judicial effectiveness, and government integrity are lower than world averages by 10 points or more.

Nevertheless, Chart 2 confirms that even in this region, the strong relationship between high levels of economic freedom and high GDP per capita holds true, although Equatorial Guinea, the oil-rich "repressed" economy, drives up the average GDP per capita for the region's least economically free countries.

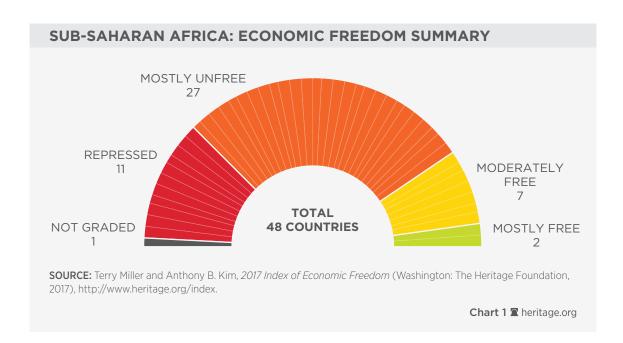

Also noteworthy is the growing attention that has been given in recent years to the

importance of ensuring food security, a critical dimension of fighting poverty, particularly in sub-Saharan Africa. More aid money cannot and will not safeguard food security. The task is multidimensional and closely linked to achieving agricultural development, economic growth, institutional stability, openness to trade, and overall social progress. It is ultimately about advancing and sustaining economic freedom so that a virtuous cycle of growth and development can occur

meaningfully for a greater number of ordinary people. As shown in Chart 3, economic freedom is an indispensable ingredient in enhancing food security in the region.

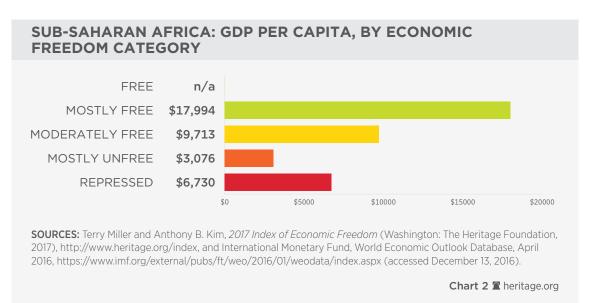

It remains to be seen whether the region's leaders have the political will to undertake the fundamental economic reforms that are needed to translate narratives of "Africa Rising" into reality. There are some success stories, and they usually involve countries with greater freedom.

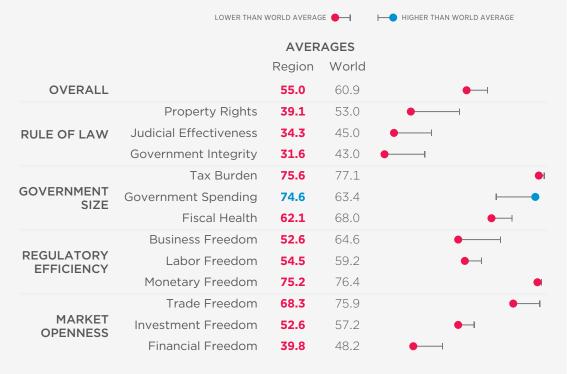

NOTABLE COUNTRIES

 Côte d'Ivoire's economic expansion has been notable with a robust GDP growth rate averaging around 6 percent over the past five years. The government has undertaken much-needed reforms to maintain and further enhance the potential for growth. These measures include strengthening management of public finances and regulatory reforms to foster the emergence of a more dynamic private sector. Fiscal policy has focused on promoting investment as well as on funding other development needs.

 Nigeria, Africa's most populous nation, has sought to improve macroeconomic stability and develop its poor infrastructure, but severe economic policy distortions and

Table 1 Theritage.org

a lack of transparency in the economic system continue to deter progress. The government has also struggled to end ongoing security threats in parts of the country that have exacerbated poverty and unemployment. The government's overreliance on oil, which accounts for over 90 percent of export earnings, has exposed the economy to major risks amid declining oil prices.

 Performing far below its potential, South Africa's economy has been stifled by political instability and a weakening rule of law. The judicial system has become vulnerable to political interference, and numerous scandals and frequent political infighting have severely undermined government integrity. Private-sector growth remains constrained by structural and institutional impediments caused by growing government encroachment into the marketplace.

Grading of Sudan's economic freedom
has resumed in the 2017 Index, reflecting
the improved availability and quality of
key economic data. The petroleum sector
provides some economic stability and
foreign exchange earnings, but other parts
of the economy are underdeveloped and
face serious structural and institutional
headwinds. Continued conflict with rebels
and South Sudan promotes uncertainty
and undermines investor confidence.

• Togo has undertaken a series of economic reforms in recent years, restructuring its key banking, electricity, and transportation sectors. The corporate tax rate, formerly one of the region's highest, has been lowered. The government has also taken steps to divest public enterprises, and there are plans to privatize inefficient public banks. However, an inefficient business environment and weak public administration continue to undermine overall competitiveness.

ECONOMIC FREEDOM IN SUB-SAHARAN AFRICA

| World Rank | Regional Rank | Country | Overall Score | Change from 2016 | Property Rights | Judicial Effectiveness | Government Integrity | Tax Burden | Government Spending | Fiscal Health | Business Freedom | Labor Freedom | Monetary Freedom | Trade Freedom | Investment Freedom | Financial Freedom |
